

Supplementary Figure S1

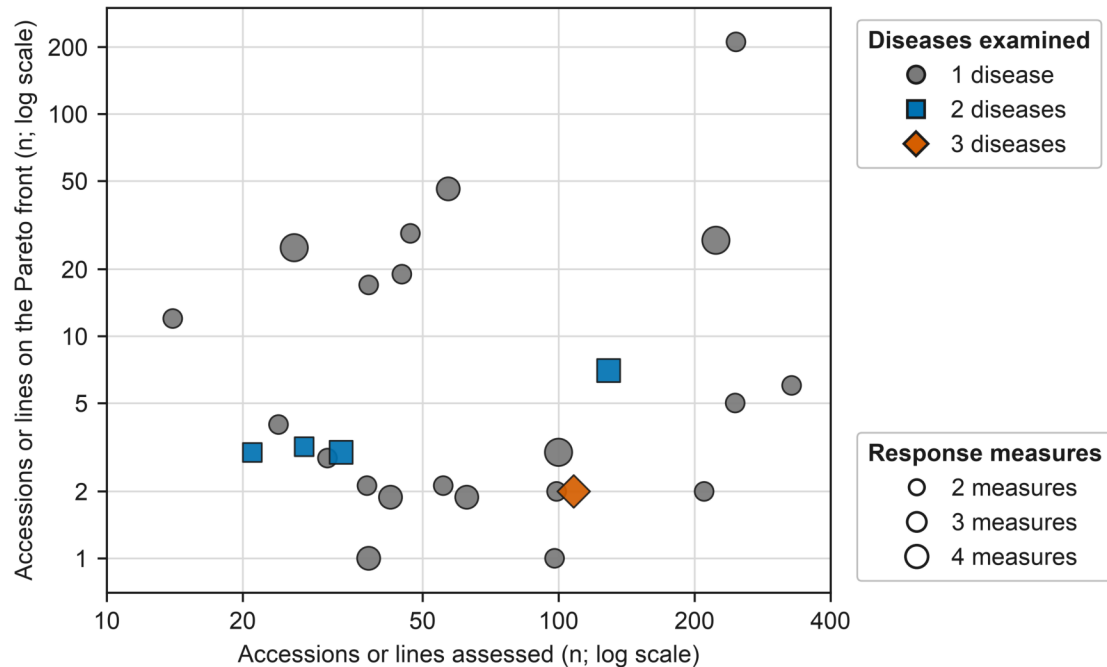

Figure S1. Numbers of accessions or lines assessed and on the Pareto front in 26 sorghum disease-response analyses. Each point represents an analysis. An accession or line was on the Pareto front when no other accession or line performed at least as well on every response and better on at least one. The axes give the numbers assessed and on the Pareto front on logarithmic scales. Across the 26 analyses, the counts on the Pareto front summed to 439. Symbol shape and color show the number of diseases examined; symbol size shows the number of response measures. Symbols for analyses with the same counts are separated for clarity. Table S8 lists the exact counts.
